Founded	1996	2002	2005 (2003 under the name of „cool Flying“)	2005 (former research project of the german ministry of environment)	2006
CER	No	Yes, certain projects	Yes, certain projects	Yes, all projects	No
VER	Yes, all projects	Yes, certain projects	Yes, certain projects	No	No
Gold standard	Not at the moment	Works as a guideline, but isn't implemented	Yes, one project	Yes, all projects	No
Projects	Energy-saving lamps in South Africa, Kazakhstan and on the Marshall Islands, tree planting in Uganda, wind power and manual pumps in India	Solar energy in Eritrea and Costa Rica. Electricity from methane in South Africa, wind power in Madagascar, solar energy in the Himalaya, biomass energy in India. No tree planting	50% tree planting for example in Uganda. Wind power in New Zealand. energy- saving lamps in Jamaica. Solar cells in Ghana, Tanzania, Honduras and Nicaragua. Heating station powered by biomass and sun in Brazil. Biomass in Cambodia, natural gas in Bolivia	Solar energy instead of diesel in India, sewage treatment in Thailand that produces energy and reduces emissions of methane, heating station powered by waste, warm water out of solar energy and energy saving lamps in South Africa	Tree planting in Honduras and Senegal- or acquisition of EU emission allowances
Administration costs	40 %	20 %	Don't want to talk about it	Less than 20%	Don't want to talk about it
Profit orientated	Yes	No	No	No	Yes
Example: Stockholm- New York (One Way)	880kg cost 92 sek (105/t)	1185 kg cost 264 sek (223/t)	Solely CO <sub>2</sub> : 690 kg cost 118 sek (171/t) All gases: 1380 kg cost 219 sek (159/T)	2050 kg cost 386 sek (188/t)	1006 kilo cost 91 sek (90/t)

Highest costs

INDIA

Many trees

Honduras.

Comment

Reliable Actor in many respects and with some good projects. Highest administration costs and a significant charge of 10% to the holding company in combination with the forestation result in low rating. Cooperate with British Airways, lastminute.com, Via Latina and others

Good actor with low administration costs. Advantages are the exclusion of tree planting and working in accordance with the gold standards.

Good

Could be a good choice, but too much tree planting and some hesitating projects result in low rating. The fact that they don't want to talk about their administration costs gives an unreliable impression. Cooperate with Apollo and others

Pretty genuine. If you really want to know, where the money goes, they offer the best combination with certified emission reduction and the gold standard. Furthermore the lowest administration costs.

New actor, who doesn't seem to be reliable in no way. Tree planting, the fact, that they don't want to talk about their administration costs and that they are new on the market are a bad combination.

Seems unreliable
